

Unitech MS910 and MS912

Quick setup for ZiiZii iOS

(Last updated 5 April 2016)

1. If the scanner is currently paired to an iOS or Android device, open Bluetooth settings on the device and choose to “forget” or “unpair” the scanner.
2. Scan the following sequence of barcodes:

.E031\$

Disconnect Bluetooth

.A001\$

Apply factory default configuration

.E043\$

Activate HID mode

(For pairing with iOS devices)

.E047\$

Enable iOS hotkey

(Allows double tapping the scan trigger to open the iOS on-screen keyboard when needed)

.L001\$

Enable scanning MSI barcodes

(MSI decoding is disabled by default)

.A014\$

Transmit AIM Code ID

(Allows ZiiZii to detect symbology)

3. Open Bluetooth settings on the iOS device, and tap the scanner in the list of available devices. Wait for the scanner to connect.
4. Open ZiiZii, begin editing an order, and wait for the “Scanner connected” status to appear in the order edit screen. You may now begin scanning barcodes. Alternately, scan a barcode while in the label printing screen to create a new label from the scanned item.
